

CURRICULUM BASED CLASSES EXAMPLE

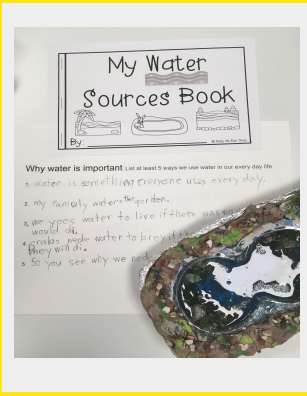

Triops

Hands on learning for Life Science is taught through a multitude of projects for all types of learners. From sketching sea life to making 3D sculptures a of puffer fish, to hatching, observing and raising triops in the classroom, students explore different methods for understanding life in the water.

Triops

Water source

Science and the study of nature becomes more tangible when students physically build their own landscapes. Incorporating armatures building, salt dough, epoxy pours and paint students explore a multitude of materials to build a mini ecosystem.

SOCIAL STUDIES

Social Studies can be a trip around the world for our students looking at how different cultures express themselves through their art. It can take our students on a journey viewing celebrations, fashion, photography, architecture and so much more and in so many mediums from paint, drawing, poetry for a deeper understanding of self expression and their place in this modern world
